#Minee is a cutting-edge safety smartwatch that leverages the latest advancements in Artificial Intelligence and Machine Learning to help keep users safe. The watch is equipped with a range of sensors that monitor the user's heart rate, sound around them, GPS location, and movement patterns. The machine learning algorithms running on the watch are trained to detect certain key phrases like "HELP" or "DANGER" in the sound around the user, as well as to identify new locations and suspicious activities. As the user wears the watch over time, the machine learning algorithms adapt to the user's activities, learning to differentiate between normal and potentially dangerous activities. This allows the watch to alert the user to potential threats in real-time, providing peace of mind and an added layer of safety wherever they go.

Title and description about existing Projects (if any)
